🎭 EVENT PLAN REPORT

Spy vs Spy – QR Treasure Hunt

Fest Event Coordination Report

1. 📌 Event Concept

The event is designed as a **spy-themed treasure hunt** where teams act as secret agents on a mission.

Participants must solve clues, complete spy-themed activities, and move across multiple checkpoints to uncover the final secret mission.

The hunt will be conducted using **QR-code-based clues**, supervised by volunteers to prevent cheating.

2. 🎯 Event Objective

The objective of the event is:

- to create an engaging fest activity
- to encourage teamwork and problem-solving
- to test logical thinking and observation skills
- to provide an immersive "spy mission" experience

3. 👥 Team Structure

- Each team: **3–4 members**
- Maximum teams in main round: **6–8 teams**
- If registrations exceed 10 teams, an **elimination round** will be conducted

4. 🏁 Event Rounds Structure

The event will be conducted in **two stages**.

ROUND 1: Elimination Round

(Only if teams > 10)

This round is used to shortlist teams for the main treasure hunt.

Format

Spy-themed quick puzzle round.

Examples:

- cipher decoding
- logical riddles
- mini puzzle challenge
- clue-solving test

Duration

10–15 minutes

Qualification

Top **6–8 teams** based on fastest completion / highest score.

ROUND 2: Main Treasure Hunt

Qualified teams enter the main event.

This is the actual **Spy vs Spy QR Hunt**.

5. 🎮 Main Hunt Flow

The treasure hunt consists of multiple checkpoints.

Suggested: **4–5 rounds**

Flow:

1. Team receives first clue
2. They solve and reach location
3. Volunteer verifies location
4. Team completes checkpoint activity
5. Volunteer provides next QR clue
6. Process repeats until final clue

6. 🔳 QR Code System

Instead of sticking QR codes physically in common locations, each team will be assigned a **guide volunteer**.

The volunteer carries the official QR clues on their phone.

This prevents:

- tearing of QR stickers
- stealing
- clue sharing
- crowding at one location

The QR is shown **only after task completion**.

This ensures fair play.

7. 👤 Volunteer System

Each team will be assigned **one volunteer guide**.

Volunteer Responsibilities

- stay with assigned team
- verify checkpoint completion

- show official QR clues
- ensure no phone cheating
- record timestamps / progress
- report disputes

This makes the event easy to manage and secure.

8. 🔐 Anti-Cheating Measures

To prevent cheating:

- no personal phones used for clue scanning
- only volunteer phone allowed
- one volunteer per team
- staggered team start times
- different clue routes for different teams

- **9. 🗺 Route System**
- Multiple routes will be created to avoid teams following each other.
- Example:
- **Route A**
- Library → Seminar Hall → Canteen → Final
- **Route B**
- Lab → Garden → Stage → Final
- **Route C**
- Auditorium → Parking → Classroom → Final
- This avoids overlap and crowding.

10. 🎯 Checkpoint Activities

At every checkpoint, the team must complete one spy-themed task before receiving the next clue.

Examples:

- code decryption
- puzzle assembly
- memory challenge
- hidden object search
- laser rope crossing
- blindfold guidance task

These tasks increase engagement and difficulty.

11. 🧩 Final Round Concept

At every checkpoint, the team receives **one fragment of the final QR code**.

Example:

- Piece 1
- Piece 2
- Piece 3
- Piece 4

At the final stage, all pieces are assembled to form **one complete QR code**.

Once scanned, it reveals the final clue / final location.

This acts as the grand finale.

12. 🏆 Winner Selection

Winning criteria:

- fastest team to finish
- least hints used
- successful completion of all tasks

Optional scoring:

- 1st = 100 points
- 2nd = 80 points
- 3rd = 60 points

13. ⏱ Estimated Duration

Stage	Time
Registration	15 min
Elimination	15 min
Main Hunt	30–45 min
Finale	10 min

Total Duration: 1–1.5 hours

14. 📋 Volunteer Requirement

Recommended:

- 6–8 team volunteers
- 2 checkpoint support volunteers
- 1 scoring desk volunteer
- 1 backup volunteer

Total:
8–10 volunteers
